NORTH-HOLLAND

SUBJECT INDEX OF VOLUME 67*

Collocation method

Nonlinear static analysis of rectangular plates on elastic foundations by the orthogonal point collocation method, P.C. Dumir and A. Bhaskar (1) 111–124

Dynamics

Transient probabilistic systems, W.K. Liu, G. Besterfield and T. Belytschko (1) 27–54
Practical performance of the θ_1-method and comparison with other dissipative algorithms in structural dynamics, C. Hoff and P.J. Pahl (1) 87–110
Sequential optimal truss generator for frequency ranges, T. Nakamura and M. Ohsaki (2) 189–209
Development of an implicit method with numerical dissipation from a generalized single-step algorithm for structural dynamics, C. Hoff and P.J. Pahl (3) 367–385

Elasticity

Finite element analysis of two-dimensional shear flexible frame structures: Nonlinear analysis, D. Karamanlidis (1) 55–68
Nonlinear static analysis of rectangular plates on elastic foundations by the orthogonal point collocation method, P.C. Dumir and A. Bhaskar (1) 111–124
Finite element analysis of two-dimensional shear flexible frame structures: Linear analysis, D. Karamanlidis and R. Jasti (2) 161–169
Triangular ring element with analytic expressions for stiffness and mass matrix, T. Ladefoged (2) 171–188
Nonlinear computation of axisymmetric solid rubber deformation, I. Fried and A.R. Johnson (2) 241–253

Finite difference methods

A mixed finite element formulation for Reissner–Mindlin plate theory: Uniform convergence of all higher-order spaces, T.J.R. Hughes and L.P. Franca (2) 223–240
A local oscillation-damping algorithm for higher-order convection schemes, J. Zhu and M.A. Leschziner (3) 355–366

* The issue number is given in front of the page numbers.

Finite element and matrix methods

A finite element solution of radiative heat transfer in participating media utilizing the moment method, A.C. Benim (1) 1 – 14
Transient probabilistic systems, W.K. Liu, G. Besterfield and T. Belytschko (1) 27 – 54
Finite element analysis of two-dimensional shear flexible frame structures: Nonlinear analysis, D. Karamanlidis (1) 55 – 68
The integral yield criterion of finite element and its application to limit analysis and optimization problems of thin-walled elastic-plastic structures, R. Kačianauskas and A. Čyras (2) 131 – 147
A preconditioning technique for the efficient solution of problems with local grid refinement, J.H. Bramble, R.E. Ewing, J.E. Pasciak and A.H. Schatz (2) 149 – 159
Finite element analysis of two-dimensional shear flexible frame structures: Linear analysis, D. Karamanlidis and R. Jasti (2) 161 – 169
Triangular ring element with analytic expressions for stiffness and mass matrix, T. Ladefoged (2) 171 – 188
Nonlinear computation of axisymmetric solid rubber deformation, I. Fried and A.R. Johnson (2) 241 – 253

General Rayleigh – Ritz and Galerkin techniques

Comparison of Rayleigh's noninteger-power method with Rayleigh – Ritz method, I. Elishakoff and C.W. Bert (3) 297 – 309

Heat and diffusion

A finite element solution of radiative heat transfer in participating media utilizing the moment method, A.C. Benim (1) 1 – 14
A preconditioning technique for the efficient solution of problems with local grid refinement, J.H. Bramble, R.E. Ewing, J.E. Pasciak and A.H. Schatz (2) 149 – 159
Constrained integral method for solving moving boundary problems, R.S. Gupta and N.C. Banik (2) 211 – 221
An analysis of viscous splitting and adaptivity for steady-state convection-diffusion problems, W.G. Szymczak (3) 311 – 354

Incompressible and near incompressible media

Nonlinear computation of axisymmetric solid rubber deformation, I. Fried and A.R. Johnson (2) 241 – 253

Limit solutions

The integral yield criterion of finite element and its application to limit analysis and optimization problems of thin-walled elastic-plastic structures, R. Kačianauskas and A. Čyras (2) 131 – 147

Nonlinear mechanics

Finite element analysis of two-dimensional shear flexible frame structures: Nonlinear analysis, D. Karamanlidis (1) 55 – 68
Material rate dependence and mesh sensitivity in localization problems, A. Needleman (1) 69 – 85
Practical performance of the θ_1-method and comparison with other dissipative algorithms in structural dynamics, C. Hoff and P.J. Pahl (1) 87 – 110
Nonlinear static analysis of rectangular plates on elastic foundations by the orthogonal point collocation method, P.C. Dumir and A. Bhaskar (1) 111 – 124
Nonlinear computation of axisymmetric solid rubber deformation, I. Fried and A.R. Johnson (2) 241 – 253
A group-theoretic approach to computational bifurcation problems with symmetry, T.J. Healey (3) 257 – 295

Numerical solution procedures

A family of numerical methods for the solution of high-order general initial value problems, E.H. Twizell (1) 15 – 25
Transient probabilistic systems, W.K. Liu, G. Besterfield and T. Belytschko (1) 27 – 54
An analysis of viscous splitting and adaptivity for steady-state convection-diffusion problems, W.G. Szymczak (3) 311 – 354

Optimization and design of structures

The integral yield criterion of finite element and its application to limit analysis and optimization problems of thin-walled elastic-plastic structures, R. Kačianauskas and A. Čyras (2) 131 – 147
Sequential optimal truss generator for frequency ranges, T. Nakamura and M. Ohsaki (2) 189 – 209

Phase changes

Constrained integral method for solving moving boundary problems, R.S. Gupta and N.C. Banik (2) 211 – 221

Plasticity

Material rate dependence and mesh sensitivity in localization problems, A. Needleman (1) 69 – 85
Discussion of "On constitutive relations at finite strain: hypo-elasticity and elasto plasticity with isotropic or kinematic hardening, by S.N. Atluri" (Short Note), L. Szabó (1) 125 – 127
The integral yield criterion of finite element and its application to limit analysis and optimization problems of thin-walled elastic-plastic structures, R. Kačianauskas and A. Čyras (2) 131 – 147

Shells and plates

Nonlinear static analysis of rectangular plates on elastic foundations by the orthogonal point collocation method, P.C. Dumir and A. Bhaskar (1) 111 – 124
The integral yield criterion of finite element and its application to limit analysis and optimization problems of thin-walled elastic-plastic structures, R. Kačianauskas and A. Čyras (2) 131 – 147
A mixed finite element formulation for Reissner–Mindlin plate theory: Uniform convergence of all higher-order spaces, T.J.R. Hughes and L.P. Franca (2) 223 – 240

Solutions of differential equations

A family of numerical methods for the solution of high-order general initial value problems, E.H. Twizell (1) 15 – 25
Practical performance of the θ_1-method and comparison with other dissipative algorithms in structural dynamics, C. Hoff and P.J. Pahl (1) 87 – 110
Constrained integral method for solving moving boundary problems, R.S. Gupta and N.C. Banik (2) 211 – 221
A local oscillation-damping algorithm for higher-order convection schemes, J. Zhu and M.A. Leschziner (3) 355 – 366
Development of an implicit method with numerical dissipation from a generalized single-step algorithm for structural dynamics, C. Hoff and P.J. Pahl (3) 367 – 385

Stability in structural mechanics

A group-theoretical approach to computational bifurcation problems with symmetry, T.J. Healey (3) 257 – 295
Comparison of Rayleigh's noninteger-power method with Rayleigh–Ritz method, I. Elishakoff and C.W. Bert (3) 297 – 309

Structural mechanics

Finite element analysis of two-dimensional shear flexible frame structures: Nonlinear analysis, D. Karamanlidis (1) 55 – 68
Practical performance of the θ_1-method and comparison with other dissipative algorithms in structural dynamics, C. Hoff and P.J. Pahl (1) 87 – 110
Finite element analysis of two-dimensional shear flexible frame structures: Linear analysis, D. Karamanlidis and R. Jasti (2) 161 – 169
Triangular ring element with analytic expressions for stiffness and mass matrix, T. Ladefoged (2) 171 – 188
Sequential optimal truss generator for frequency ranges, T. Nakamura and M. Ohsaki (2) 189 – 209
A group-theoretical approach to computational bifurcation problems with symmetry, T.J. Healey (3) 257 – 295

Development of an implicit method with numerical dissipation from a generalized single-step algorithm for structural dynamics, C. Hoff and P.J. Pahl (3) 367 – 385

Transport phenomena

A preconditioning technique for the efficient solution of problems with local grid refinement, J.H. Bramble, R.E. Ewing, J.E. Pasciak and A.H. Schatz (2) 149 – 159
A local oscillation-damping algorithm for higher-order convection schemes, J. Zhu and M.A. Leschziner (3) 355 – 366

Viscoelastic and viscoplastic media

Material rate dependence and mesh sensitivity in localization problems, A. Needleman (1) 69 – 85
